

**DISK DRIVE COVER FOR USE WITH A DISK DRIVE TO PROVIDE FOR  
DISK SHROUDING AND HEAT DISSIPATION**

**ABSTRACT**

Disclosed is a disk drive cover that provides improved disk shrouding and heat dissipation. Part of the cover is recessed relative to the rest and may be substantially circular. The recessed portion may be located approximately adjacent to at least one disk and may be substantially coextensive with at least one disk. Further, the internal side of the recessed portion may be at a vertical depth sufficient enough to shroud at least one disk. Additionally, the recessed portion may further include at least a member that projects from the external side of the recessed portion, such as approximately arcuate-shaped members or approximately rectangular-shaped members, to aid in heat dissipation.
